

I could not move my arm without pain.

I had been having pain and discomfort in my right shoulder for a long period. I could not even move my arm without having pain. I have had surgery along with therapy but I was still in pain. That was until a good friend of mine recommended for me to try chiropractic. I did have some doubts that chiropractic could help me. I did not realize that chiropractic care could help me with my shoulder. I thought that it was just for helping with areas of the back.

On my initial visit, I found the office staff to be very friendly and they made me feel very comfortable. Dr. John explained everything he did and the reasons so I could understand.

I am now able to move and use my arm without any pain. I was also able to quit taking the medications I was prescribed.

I now believe in the healing of Dr. John and his staff. I always recommend a trip to the chiropractic office anytime I hear that someone is in pain.

Sincerely,
